

Hometask3

1. Develop simulation of the Car wash station. Several car wash locations are available. Only one car can be in one place. Washing one car takes a fixed time. If all places are occupied, the car will not wait for more than a certain time and will go to another car wash.
2. Please provide link to your GitHub with the solution. Additionally, to the solution it should contain readme with you matriculation number, solution project short description with indication of the development environment.
